VINEYARD WIND LOOKS TO THE FUTURE

Vineyard Wind is developing the nation's first large-scale offshore wind project, and it will be right off our shores of the Cape and Islands. With the industry ready to take-off, and thanks to the support of the Massachusetts Clean Energy Center (MassCEC), Cape Cod Community College is launching several credit and non-credit courses designed to educate and train the future professionals who will make our region the global hub for offshore wind.

OFFSHORE WIND 101

Thanks to a generous grant from MassCEC, "Offshore Wind 101: Energy, Climate and Jobs" is a free, non-credit, introductory course that introduces you to global and state trends, local career and supply chain opportunities, and technology basics related to offshore wind.

It will be held for students in local high schools, and for community members at the College's Hyannis Center.

CAREERS FOR TOMORROW
